Settings

Manage your Cloudflare One account, plan, and preferences.

Team domain

Your team domain is where users enroll devices with the Cloudflare One Client and access your protected applications. If you change the subdomain, you will need to update your organization's identity providers (IdPs) and the Cloudflare One Client on all devices to reflect the change. Team domain documentation

Downloads

Downloads

Download the latest versions of the Cloudflare One Client and cloudflared.

View

Admin controls

Manage how your end-users consume seats and other admin use the Cloudflare One dashboard. To manage account members and dashboard SSO go to Manage account > Members.

Remove inactive users from seats

Set a time frame to automatically mark users who have not completed an authentication event as inactive. These users will no longer count towards a seat in your plan.
